

MB-GLASS BARRIER

External juliet balcony

The system of window and door installation in sandwich panels presented here is a modern solution manufactured by ALUPROF S.A, meeting expectations and requirements of our customers, architects, investors and cooperating companies.

It is a system of aluminium profiles which enable assembly and simple installation of different types of windows and doors of the following systems: MB-45, MB-45S, MB-59S, MB-59SE, MB-59S CASEMENT, MB-59S PIVOT, MB-60, MB-60 PIVOT, MB-60 US, MB-70 and MB-70 US in buildings built of different types of sandwich panels of the thickness ranging from 60 to 150 mm.

The system features very simple construction and easy installation, involving clamping of fixing angle plates and masking profiles in special catch strips. It is of particular importance in the times in which so much stress is placed on time-efficiency of installation works. Corner connections of profiles are made by cutting the profile ends at the angle of 45° and joining them by means of supplied aluminium corner cleats.

Should there arise any queries or doubts, ALUPROF S.A. specialists are always ready with their assistance and advice.
